

Product Manager with 9+ years experience across **pharma and digital health**, specializing in **0→1** product development, **clinical AI** systems, and patient-centric solutions. Proven ability to identify healthcare workflow gaps, define product strategy and metrics, and deliver measurable clinical and business outcomes. Experienced in working with clinicians, data scientists, and engineering teams to build data-driven healthcare products aligned with real-world clinical use.

EXPERIENCE

Krakel Healthcare (Co-founder and Product manager) | Visakhapatnam, Apr 2022 – Nov 2025

Problem: Lack of early screening tool for respiratory diseases for population health

Built **0→1** clinical AI product for early respiratory **disease screening**, used by pulmonologists and frontline health workers
Drove product discovery via **50+** clinician interviews; translated fragmented clinical workflows into a usable hospital product
Owned ML product **lifecycle (data → labeling → validation)**, defining **sensitivity/specificity thresholds**
Validated model on **> 2,700+** patient recordings, enabling real-world **pilot deployment**
Designed structured **data capture workflows** integrated into hospital settings, improving adoption and data reliability
Scoped MVP balancing clinical **usability, model performance**, and speed of deployment in high-pressure environments

Numen Health -Chronic disease management platform | Bangalore, April 2021 – March 2022
Product Manager -Patient Engagement and Care Delivery

Problem: Low patient engagement, poor adherence, and missed follow-ups in chronic disease programs

Identified key drop-offs in chronic care journeys through 40+ user interviews/year
Defined core **metrics (engagement, adherence, follow-ups)** and owned roadmap execution
Launched proactive care workflows improving **engagement by 19%** and **medication adherence by 10%**
Reduced missed follow-ups by **12%**, improving continuity of care
Built care team dashboards, reducing response time and improving intervention speed

Accenture (Client: Bristol-Myers Squibb) Chennai | Nov 2013 – Feb 2017
Scientific Writer -Lead

Led client-facing **delivery** for Bristol-Myers Squibb, managing cross-functional teams to produce **FDA-compliant clinical documentation** (patient narratives, safety summaries, CSRs) within strict regulatory timelines
Translated complex **clinical trial data** into clear, structured regulatory submissions, ensuring data **accuracy and compliance**
Built strong stakeholder relationships across medical, regulatory, and operations teams, ensuring alignment and timely delivery
Developed deep understanding of clinical research processes, regulatory standards, and data integrity requirements

Cognizant Analyst – Market Research |Hyderabad May 2011 – Nov 2013

Conducted **market and competitive analysis** for global pharma clients, identifying trends and strategic opportunities
Synthesized large datasets into actionable insights to support business and product decision-making
Supported **enhancements to internal research platforms**, improving data accessibility and usability

EDUCATION

AI Product management certification by Rethink Systems - 2026

MBA from Indian Institute of Management Calcutta (IIM C) 2017-2018

M.Pharm, Vinayaka Missions University 2009-2011

B.Pharm, Nagarjuna University 2005-2009

SKILLS

Product Discovery, Customer Interviews, User research, Roadmapping, System thinking,

Tools: Figma, JIRA, Notion, Mixpanel, Whimsical, Google Suite, A/B testing

Tech / AI: Supabase, Lovable, Stitch, Claude (Prototyping→MVP feature build → deployment)

PROJECTS

1) Lung Sound Research & Data Collection Platform

Problem: Lack of structured, high-quality lung sound datasets for AI-driven diagnosis

Designed and led development of an Android-based research app (APK) integrated with a digital stethoscope to enable **real-time lung sound data** capture
Defined clinician-friendly workflows to ensure adoption in high-pressure hospital environments
Enabled scalable data **collection pipeline for ML model training**

Impact:

Successfully piloted at a leading medical college hospital (KIMS Bhubaneswar)
Adopted by 4+ pulmonologists in Pilot clinical settings
Collected **>2,700+** high-quality patient audio samples, forming the foundation for ML model development

2) Clinical Lung Sound Learning Platform [Link](#)

Conceptualized, and designed a learning app that helps medical students (**doctors & nurses**) **practice lung auscultation** and **train their ear to detect abnormal lung sounds** for disease screening.

Key Technologies: Claude code, Vercel, Supabase, Google stitch

3) PA Triage Queue-Confidence Score [Link](#)

Problem: Inefficient triaging of AI-generated prior authorization (PA) submissions

Designed a confidence scoring system (**0–100**) using drug/payer data, approval history, and documentation quality

Built a color-coded triage queue (**Green/Yellow/Red**) with explainability for low-confidence cases

Enabled bulk approval for high-confidence PAs and a feedback loop to improve model performance

Impact:

Reduce review time via **1-click approvals** for low-risk PAs
Focused human effort on high-risk cases, **improving efficiency and approval outcomes**
